Finger Type

10 typographic tools in a small palette

FingerType is an XTension to QuarkXPress that provides incredible ease and fluid control of text. Using a new approach, FingerType allows the user to click-hold-and-drag, on text or text ranges, to achieve most of the character and paragraph attributes available in QuarkXPress. For example, kerning a letter with FingerType is merely a matter of clicking on the letter and sliding it into the desired position!
