

BureauManager XT

perfect control for archiving and transfer QXPress documents

The BureauManager XTension is the definitive and ultimate tool that allows you to easily and completely prepare a job for delivery to a Service Bureau. It quickly extracts information from the original document to determine which fonts (screen and printer) and high resolution graphics are required to be copied.

- The Report Generator comes with 12 predefined document reports. Each of these can be easily modified to include the exact document report details you require. Thus you can simply extract what you want, when you want.
- A report can be created 'on the fly' for any document, opened or unopened, or else you may choose to generate the report for the document during the 'Collect For Output' process.
- BureauManager also contains one of the most powerful Collect For Output (CFO) facilities available to QuarkXPress users.
