

CoCo RGB CMYK

Color correction plug-in for Photoshop

CoCo is a color correction plug-in and a color separation plug-in for Photoshop. Ideal for photography and fine art color corrections, separations for t-shirt printing and creating spot color separations, bump plates and masks.

CoCo RGB/CMYK brings photographers and printers the smoothest, proportionate, and predictable color correction. This allows natural color changes without losing the shape or characteristics of the image and avoids time-consuming masking.

NOTE:

We just listed this PlugIn for the sake of completeness.
