

## CollectForOutput Plus

"Collect for putput..." is extended with an option to look for data problems in RGB or overset

CollectforOutputPlus is a QuarkXPress 4.x XTension, which allows to collect a file with all included components for high resolution output into one folder.

CollectforOutputPlus collects the original file with included pictures and/or fonts. A protocol with detailed information about all components of the file will be established.

If Stuffit 4.0 or higher is installed on your Mac, CollectforOutput Plus compresses the collected files to one file.
