

CombsXT

easily add data “combs” to your Quark Press layouts

Combs XT lets you quickly and easily add data “combs” to your QuarkXPress layouts. Combs are those convenient to use, but impossible to create grids for facilitating completion of forms and applications. Combs may be created in several different styles: open, box, cage, underline, top closed, and bottom closed. Each of these styles can be edited and modified to meet the most demanding design specification.
