

# Dashes XT

## Hyphenation in QuarkXPress®

The Dashes XTension provides high quality hyphenation for your QuarkXPress text. Its aim and purpose is to provide a tool that improves the appearance and readability of a user's page by inserting hyphens which are inconspicuous, so as not to disturb the flow of meaning in the story.

**Languages:** Arabic, Belorussian, Bulgarian, Croatian, Danish, Dutch, English, Finnish, French (European and Canadian), German (old or revised grammar available. Please specify when ordering. Please note that the revised German grammar is working with QuarkXPress 4.x only!), Greek, Hebrew, Hungarian, Icelandic, Italian, Norwegian (Bokmal and Nynorsk), Polish, Portuguese, Rumanian, Russian, Slovak, Slovenian, Spanish, Swahili, Swedish, Swiss, Turkish.

Note: The Dashes supported language must either be the same as your QuarkXPress language or can be used with Passport.

### Key Benefits of the Dashes XT

- Allows you to insert discretionary hyphens into a selection of text, the current text box, or the complete document.
- When inserting hyphens, the Auto Hyphenation Rules that you specify from within QuarkXPress (Edit H&Js). are fully obeyed.
- Allows you to remove discretionary hyphens from a selection of text, the current text box, or the complete document.
- If you are unhappy with the way the XTension hyphenates a word, you can enter it into your own Dashes exception dictionary.
- Each Dashes hyphen has a stylistic ranking associated with it, this allows you to exclude hyphens that are not up to the stylistic quality you specify.
- Allows you to import and export hyphenation exception lists into and out of the XTension.
- Will correctly hyphenate words that contain ligatures.
- All the hyphens inserted are stored as discretionary hyphens within the document, thus the document will not reflow due to hyphenation exceptions, when opened or printed on another machine.
