Fast and reliable file distribution

Distribution Manager is a powerful server application designed to increase the efficiency of your daily file flow. Through automated processes including FTP services, Distribution Manager transfers files across platforms in local and wide area networks.

Distribution Manager will take care of all file transfer and distribution both within and outside your organization in a very flexible, yet maintenance-free way.

Distribution Manager makes sure all your servers and different systems work together so that your production will run as smoothly as possible

Overview:

- Fast and reliable file distribution
- Transfer files automatically between any folders in your network
- Run-schedule options for controlling when to transfer
- Trigger processing on files as soon as they arrive
- User friendly setup and configuration
