

Processes

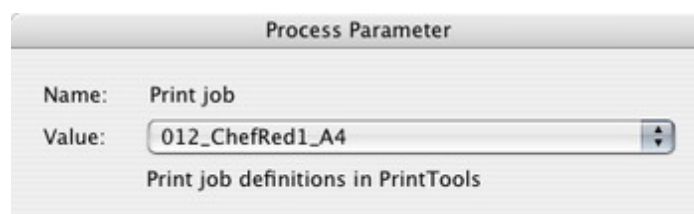

Under the tab "Processes" can be defined, which function of an other extension will carried out within "AutoJob". In the following example a printing job will created with **ex PrintTools** and the predefined printjob "181_PDF_RED".

All loaded XTensions, that are connected with AutoJob, will be shown in the upper PopUp. Each XTension has one or more predefined actions that can be called with parameters. You can combine as many actions you want from all existing XTensions in one job und let them work in an appropriate order.

Edit the parameters of a specific job:

Cancel

OK
