

## Preferences

Generell preferences affect the connection to the database, the preview of the pictures and the local path, on which the pictures should be saved.

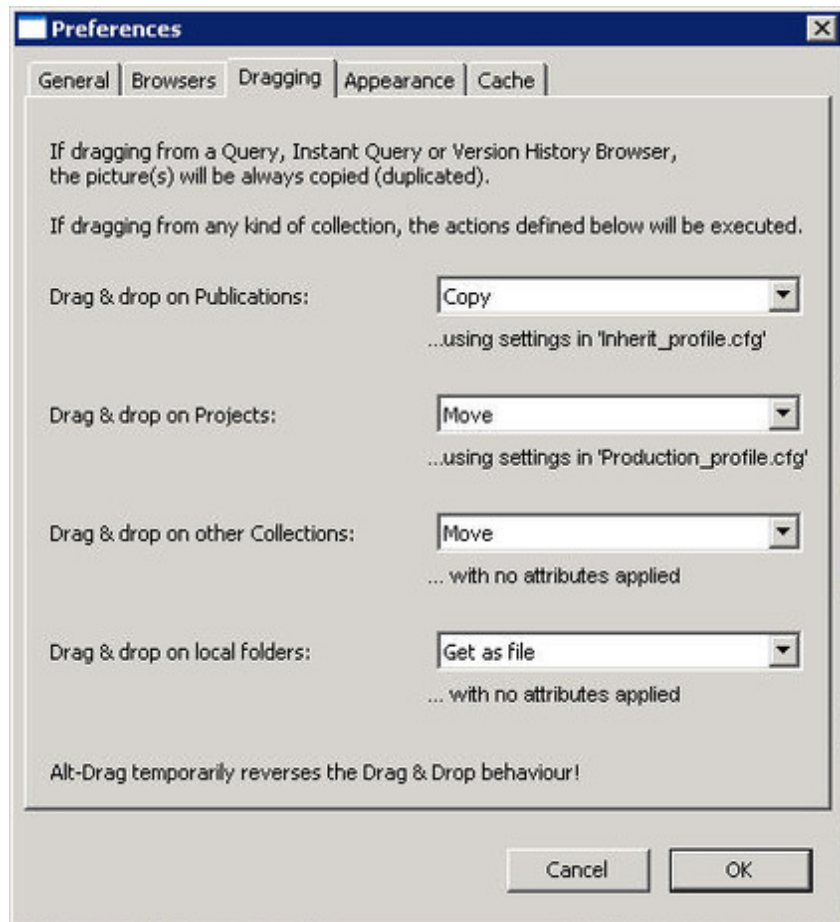

The view and the attitude while the picture search will be defined in the tabpage "Browser".

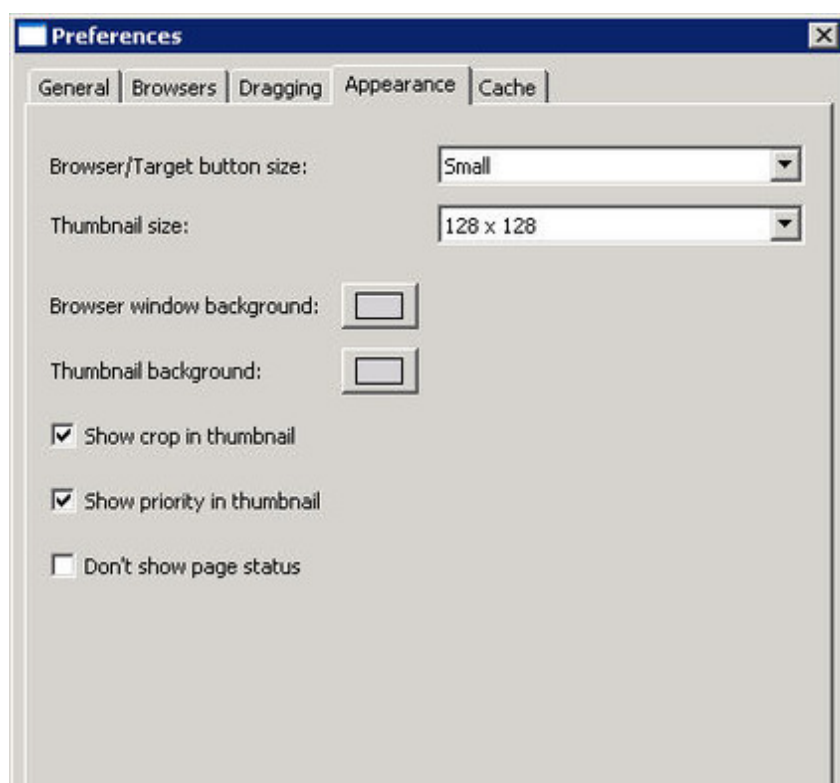

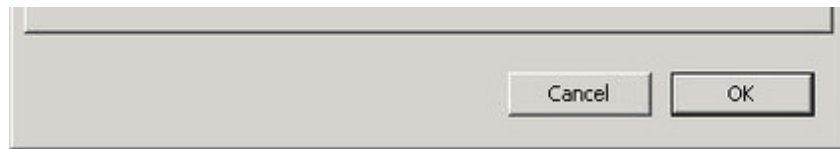

The behavior while dragging a picture (copy or move) from the source to the target can be predefined.

In the tab page "Appearance" the size of the source and targets as well as the previews can be defined. Further the background color is selectable.

The Cache-Memory is a temporary storage for often used files. Pictures, which saved here temporary, are most faster available for the application and so it advanced the procession speed.
