

ex ProductionTracker

Production tracking in the editorial environment

ex ProductionTracking is a XTension, which provides an additional palette for previewing one or more layouts in QuarkXPress and QuarkCopyDesk (InDesign and InCopy in an upcoming version) - optionally in WYSIWYG-mode or in geometric mode. These layouts didn't have to be adapted or checked out. With ex ProductionTracker you get a direct overview for current status and condition of a page, including information about checked out articles and their status. The preview of ex ProductionTracking will be updated whenever a layout or article are changed. Furthermore you have the possibility to check in or out articles directly in the palette with a mouseclick.
