

ex StatusWatch

Statusadjustment between layout and the dedicated articles in QPS

ex StatusWatch is a QuarkXPress XTension for QPS. It watches the status of all articles which are attached to a QuarkXPress document. As soon as all articles have reached the same status the layout will get a new status.

If a status based workflow has been established in a QPS system (i.e. with the XTension ex AutoJob), the layout may only reach the workflow status if all articles are complete and finished.
