

ex Utility for QPS

Change all headerfields in the QPS query palette in one shot

Easily change the header fields in QPS in one shot with this XTension. A palette lets you select and make changes to each and every header field available. Changes are made to every file listed in your active query palette (pop-up, text field and check boxes). You specify the values i.e. deadline, and all files are automatically updated accordingly. It is easy to change the status of all your files now by keystroke without the need to check them out and in again.
