

# Pictures

In the tab page "Pictures" you can define how to export the pictures. They can be saved into the file system or load directly to an URL.

## Convert raster pictures:

This option is only active if you also load the ex PreviewCreator PlugIn. Defining the parameters to control the quality and format for converting pictures.

example: type=jpg res=72 scale=100% xsize= ysize= quality= crop=yes

In that example a JPG-file will be created, with 100% size and 72 dpi. You also can „crop“ the picture to the visible region.
