Hyphenator XT

Hyphenator XT was developed to optimise hyphenation of a great number of languages. As a result, QuarkXPress users no longer have to master a language, in order to correctly hyphenate it.

This hyphenation Xtension, offers the user at least 55 hyphenation modules. including Russian, Greek, Turkish, Bahasa Indonesian, Bahasa Melayu and the Central European languages. General unifying structures for syllabification are completed with linguistic patterns. Each language module acts like a comparator which possesses an almost human understanding of the target language with its own linguistic pattern.

The number of languages supported far outreaches the borders of Europe, including Russian, Greek, Turkish, Bahasa Indonesian, Bahasa Melayu and the Central European languages.

The new version is already fully compatible with QuarkXPress 7, both on the Macintosh and Windows.

Hyphenator XT uses the intelligent syllable technology from *TALO.

Key features

- Over 55 language modules (available languages)
- Accuracy: even complex new compounds are correctly hyphenated!
- Speed: large quantities of text are hyphenated in split seconds
- Solving language specific problems
- Native Unicode support
- Automatic hyphenation on opening of a document
- Human like intelligence algorithm to process for each language module
- Automatic language detection with multilingual documents (in QuarkXPress Passport or QuarkCopyDesk Passport)
- Inserts soft hyphens so documents can be exchanged without text reflow
- New words are also correctly hyphenated
- Define exception folders for non-hyphenated words
