

InBooklet

Impose pages from a single InDesign document

Impose pages from a single InDesign document with full control over margins, gaps, bleed, creep, and crossover traps. When printing direct to a output device or printer, InBooklet will not rearrange or shuffle the pages in a document - rather reordering is handled in the print stream yielding not only quicker but more reliable results.

InBooklet Version 2.1 now offers the ability to create a new InDesign document. All InDesign objects from your document, including InBooklet Printer's Marks for Crop and Registration, are fully editable.
