

# Job Name

## Renaming of PostScript jobs

With the XTension Job Name you can easily rename your PostScript jobs before outputting them. Not only the data name will be changed, but also the job name within the PostScript file. Ideal for the maintenance of imposition programs.

### Ideal for:

- specified naming of print jobs during the PDF creation
- generating of PostScript files and job named meaningfully for output
- hot folders that are provided over the print job queue
- every form of PostScript output over queues
- for providing of imposition programs, within the own workflow or for the output to third parties
- when outputting with registration marks the new jobname and the original document name will be printed on the film or other output media
