LinkUp Workgroup

Update text and images in an entire document

LinkUP Workgroup is a timesaving, designer-led QuarkXPress XTension that will update text and images in an entire document at the push of a button. It could save you literally hundreds of hours of update work.

LinkUP Workgroup connects QuarkXPress documents to local DBF files (simple data files created from .csv or .txt tiles) or to ODBC-compliant databases. It is capable of bi-directional update; import to your page or export from your page to the database. This is particularly useful if you want to create a database from an existing document.

But you don't have to be a database geek, with just a few set up instructions, you will be able to utilise the power of your stored data into your beautifully designed documents. Perhaps you'd prefer to drag library templates into a document and populate a page, updating each library item using LinkUP Workgroup. Useful when compiling catalogues or testing designs.

Benefits:

- Update entire documents quickly and accurately.
- Change images from low-res to hi-res by pointing to a different image folder.
- No extra proofing required. The updated info is based solely on the datasource. No manual intervention means no expensive typos.
- Create multiple language, price or image versions easily with LinkUP Projects. Increasing project profitability exponentially.

The LinkUp product family is available in different versions. A full list of functions is described in the following comparison chart:
