

PageShot

enhanced options to generate an EPS out of QuarkXPress

PageShot enhances the Save Page as EPS command by including the ability to specify multiple pages to be saved as EPS files. You can specify multiple pages either by page number or by simply checking the All Pages check box. The XTension gives you several choices of EPS file formats and lets you designate a certain area of the page to be saved as an EPS. PageShot also allows you to save a text or graphic box as an EPS file. This saves disk space by minimizing file size.
