# ProBulletts & Numbers

Make bulleted and ordered lists in a snap

ProBullets & Numbers was created to help you create bulleted lists and ordered (with sequential numbers/letters) lists in a snap. Anyone who has worked in Quark for any time knows that creating bulleted lists and ordered lists can be tedious, partially because of the precise control over these elements that Quark gives you, unlike common word processors. While these functions are commonplace in word processors and web editing programs, they have always been absent in QuarkXPress until now!
