

RGB/Overflow Checker

checks QuarkXPress files for RGB pictures and overset

The RGB/Overflow Checker will automatically examine your Quark XPress document whenever you Print, Save, or Save Page as EPS, searching for any instance of a bitmap graphic saved in RGB format instead of CMYK. The XTension will also alert users to headerless graphic files from foreign platforms placed in XPress documents, and can be set to abort Print jobs that contain RGB data. Additionally, the XTension will look for any instance of overflow text in a document during the same Print, Save and Save Page as EPS functions, and report on found instances of text overflow.
