ScanPrepPro

interactiv improvement of scans

ScanPrepPro improved the scanquality interactiv in Photoshop. The user defines parameters for later printing before scanning etc. This happens in style of multiple choice tests. After this ScanPrepPro calculates the optimal values automaticly for the scan. It`s possible, to do a common scan at first and connect ScanPrepPro later, for calculating too. As well up to 18 parameters like scanresolution, outputresolution, light/shadow, modus etc. are considered.
