

# SmartXT

Recognizes a DCS file during printing to a high resolution output device, and it creates and downloads a high resolution composite file of the image

The XTension recognizes a DCS (Desktop Color Separation) file during printing to a high resolution output device, and it creates and downloads a high resolution composite file of the image. When it recognizes a PSImage file, during printing or separation output to a high resolution output device, it will create (depending on the nature of the high-resolution file) and download (Automatic Picture Replacement) a high resolution file of the image. Clipping paths are fully supported.
