

S&R XT

Enhanced search and replace in QuarkXPress documents

XTension for search and replace of optional amounts of text chains in QuarkXPress. Supports up to 255 variable long Joker (also called WildCards) for each search text and also type specific Jokers can be defined (e.g. only numbers or only lower-case).

In a script language even complex functions with IF... THEN... ELSE connections can be programmed. These are saved as QuarkXPress documents and are thus reproducible as often as desired and changed according to any order.
