

Features

All-new, inside and out

The new interface gives you the perfect excuse to mix a little play with your work. It's sleek, straightforward design makes it easy to locate, group, examine, preview and activate any font in your library.

- Sleek and modern interface
- Interactive font previews
- Built for Mac OS X Tiger* and Leopard
- Utilizes new Universal Type Server technology
- 24/7 font management—new “core” application runs in the background

Support for CS4/3 InDesign and Illustrator and QXP 8/7

Suitcase Fusion 2 is an early adopter too with seamless auto-activation support for Adobe InDesign and Illustrator CS4 and QuarkXPress 8. Not there yet? No worries, Suitcase Fusion 2 also supports CS3 and QuarkXPress 7.

Suitcase Fusion™ 2 (v13.x)

- Adobe Illustrator CS3 & CS4
- Adobe InDesign CS3 & CS4
- QuarkXPress 7 & 8

Suitcase for Windows™ (v11.x)

- Adobe Illustrator CS2 & CS3
- Adobe InDesign CS2 & CS3
- QuarkXPress 7

Professional auto-activation

Suitcase Fusion 2 comes with professional-grade auto-activation plug-ins for critical design and publishing apps, including InDesign®, Illustrator®, and QuarkXPress®. These plug-ins utilize Font Sense to precisely match and auto-activate the right font types when you open a document. To avoid other conflicts, these plug-ins will also auto-deactivate the fonts upon closing a document.

- Auto-activation plug-ins for InDesign CS4/3, Illustrator CS4/3 and QuarkXPress 8/7
- Automatically activates exact type faces for leading applications*
- Automatically activates fonts in linked or embedded objects*
- Automatically deactivates fonts when a document is closed*
- Uses patented Font Sense™ technology to ensure exact font matches and precise auto-activation*
- Easily control global auto-activation preferences for each application

*Available in plug-in based auto-activation only.

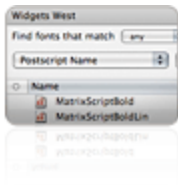

Unmatched font previews

Suitcase Fusion 2 comes with professional-grade auto-activation plug-ins for critical design and publishing apps, including InDesign®, Illustrator®, and QuarkXPress®. These plug-ins utilize Font Sense to precisely match and auto-activate the right font types when you open a document. To avoid

other conflicts, these plug-ins will also auto-deactivate the fonts upon closing a document.

- Drag-and-drop your preview text into any live document with Floating Previews
- Encoding-aware previews shows all native characters in a particular font face
- Zoom Slider dynamically adjusts preview type size on-the-fly
- Glyph View lets you see all characters supported by a selected font
- Create print sample pages of any previewed font
- View and compare any type faces side-by-side before activating
- Preview fonts in Waterfall, ABC123, Paragraph or dynamically in QuickType™
- Select, activate and export fonts from Preview Pane

Dynamic search & find

- QuickFind performs fast, dynamic searches as you type
- Search on any metadata field (style, keywords, classifications, etc.)
- Perform fast, multi-level searches
- Automatically populates font metadata, such as style, classification and foundry

Easy organization

- Font Vault provides centralized repository for easy access
- Easy back-up and restore
- Separates families into individual typefaces for precision and control
- Option to create multiple libraries within Font Vault for additional precision
- Font Vault is portable for easy transfer to other machines

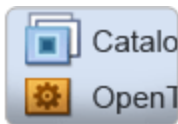

Font corruption check and repair

- Ensures stable font environment
- Eliminates font corruptions and conflicts
- Utilizes built-in font corruption detection and repair engine
- Identifies corruptions and "incomplete" fonts before they can be added
- Displays a complete list of corrupt fonts
- Repairs corrupt fonts when possible

FontDoctor™ utility (free with purchase)

- Adds additional level of font corruption detection and repair
- Generates detailed reports about bad fonts
- Automatically organizes and optimizes font library
- Easily cleans font caches

Customized font sets

- Similar to Playlists in iTunes
- Provides easy way to sort fonts to quickly find and active them
- Create your own custom font sets to fit your workflow
- Create a set of all your document's fonts directly from your document
- Nested sets (sub sets) provide even more organizational options
- Smart Sets will automatically add fonts based on any metadata you select

Manage system fonts (Mac OS X Leopard only)

-

- View all active system fonts at any time
 - Keep system fonts separate from the rest of your font collection
 - Easily override and/or disable non-critical system fonts
-
