# The Bundler

focused on the problems encountered when users are dealing with increasing numbers of mobile QuarkXPress documents

The Bundler XTension's design is focused on the problems encountered when users are dealing with increasing numbers of mobile QuarkXPress documents. A QuarkXPress user with a document on their Macintosh should be able to create a "BUNDLE" a self extracting compressed file containing a copy of the document, all the graphic files, and all the screen and printer fonts in such a way that anybody opening the Bundle on a different Mac at a different time and/or place can be as certain as possible that they will find exactly the same environment and resources, and therefore the same as when it was saved.
