

TiffExport

Open XPress Pages as TIFF files

Now you can open your QuarkXPress pages in Photoshop! The TIFF Export XTension lets you save your pages or spreads as Tagged Image File Format files (TIFFs) for greater portability. You can select a DPI of 10-400 for the resulting TIFF files so the resolution of the image is as great as you'd like.

The exported graphic file is more portable than an EPS because, with TIFF graphics, you don't have to worry about making sure clients have all the fonts used on the page. The clients can view the documents you created for them because the fonts are part of the image. TIFF Export even lets you choose the page scale that best suits your needs for great TIFFs every time.
