

# TIFF/IT XT

## HighEnd image processing in QuarkXPress

The TIFF/IT XTension allows native TIFF/IT-P1 FP (final page) with associated CT (continuous tone), HC (high resolution Contone) and/or LW (linework) images to be placed and printed, in composite or separation mode, directly from QuarkXPress. The XTension retains full and different resolutions of the original TIFF/IT-P1 CT and/or LW. The XTension directly supports the TIFF/IT images, eliminating the need to convert off-line, saving valuable time and providing maximum flexibility. The XTension supports both PostScript Level 2 and 3 devices and also allows for batch file conversion to DCS1 and DCS2.
