

# New features in Type Server 2 Light

## Client Usability

Simplified font server access and unprecedented previews.

- *Font Previews*: spectacular font and glyph previews let you see how fonts stack up side-by-side. ‘Tear-off’ the font preview and drag it into your document to see them in action.
- *Auto-activation*: Faster plug-in based auto-activation for more applications for Mac and Windows – Illustrator® and InDesign® CS2, CS3 and CS4, and QuarkXPress® 7 and 8
- *Font Consistency*: Start-up sets, which are permanently activated via the server, ensure consistency and prevent font conflicts as users share files.

## Font License Compliance

Delivers complete control to ensure you are fully compliant with your font collection.

- *License Reporting*: analyze font license compliance, forecast future licensing needs, and prevent unlicensed fonts from entering the workflow.
- *System Font Enforcement*: the server maintains a ‘white list’ of fonts prevent users from installing unapproved fonts to the system font folders of the OS.
- *Start-up Sets*: Automatically and permanently activate sets of fonts at start-up for your client users to ensure consistency across shared documents.

## Simplified Management

End-to-end solution for managed deployment that dramatically reduces rollout time and ensures consistency for end-users.

- *Simplified Client Deployment*: Pre-populate server connection settings for clients, so users can quickly connect.

## Performance & Scalability

Open source technologies offer hi-availability, now with improved usability under heavy load.

- *Improved Client Synchronization*: Client and database design optimizes server transitions, ensuring consistent user experience even under heavy load
  - *Enhanced Backup and Restore*: Transparent, cross-platform backup and restore, even between platforms and database engines
-
