

XTend Xport

Multifunctional Extractor: QuarkXPress to XML,HTML,ePaper,JPEG,PDF

Effortless exports of QuarkXPress document content to HTML, XML and ePaper, including JPEG images, PDF ..., as well as all description files like DTD, CSS and XSL. Direct WYSIWYG display of HTML and XML in your Browser!

With a mouse click you may export single articles or the whole document content including attached images. At the same time you create a page JPEG and/or PDF preview. The result of your 'work' may immediately be viewed in a web browser.

The most obvious feature is the creation of all needed output formats like text to HTML or XML and even ePaper, including images to JPEG as well as pages and articles views, in a single step!

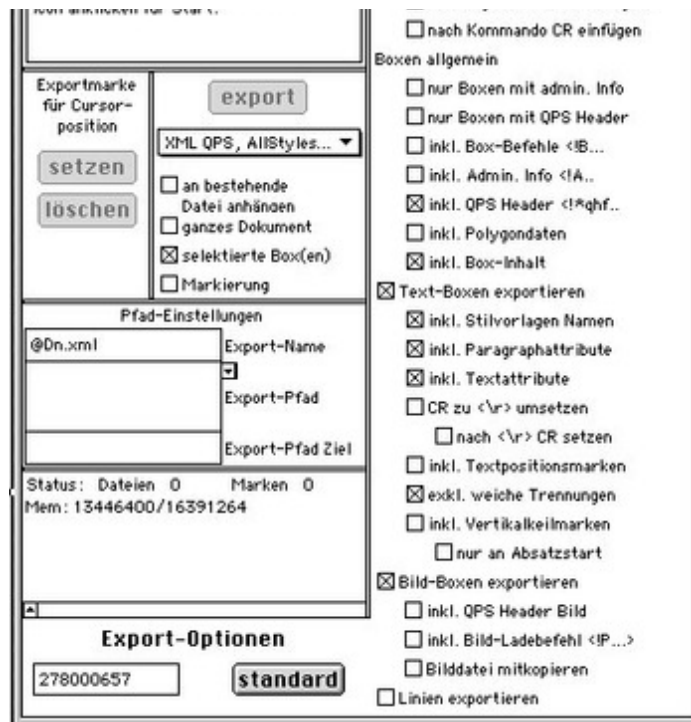

Supported text output formats:

- XML with or without QPS header information
- HTML with or without QPS header information
- SGML with or without QPS header information
- Standard 'XTend-Xport' expanded XPressTags format
- Without any commands (plain text)
- Various included options allow to export with more or less typographical commands.

Brief description of the export features:

- ACR!: Article Components Recognition:
Automatic recognition and logical sorting of an article's components boxes to preserve the read flow, like: title, lead, text, image legend, image. No grouping, chaining ... needed
- Text export formats:
XML, HTML 3, HTML 4, XPressTags, plain text
- Text encodings:
UTF-8, and for the versions 4-6: Macintosh and language depending encodings like ISO-8859-1, windows-1252 for western countries, or for example ISO8859-5, windows-1252 for cyrillic languages.
- Images extract formats:
JPEG, PICT, copy original
 - Extracts to multiple sizes, fixed or variable.
 - Extracts of special Boxes (PowerMath formulas) as JPEG image.
- HTML 4:
Support for internal and external CSS
- XML:
Support for external CSS, DTD and XSL. View exported XML data with an XML enabled Browser –Extract documents from QuarkXPress 3, 4, 5, 6 and 7 created on Macintosh or Windows.
- Powerful integrated string converter:
 - Convert any words to links.
 - Convert any other item of the output file
