

AccentMaster

Set accents comfortably with AccentMaster

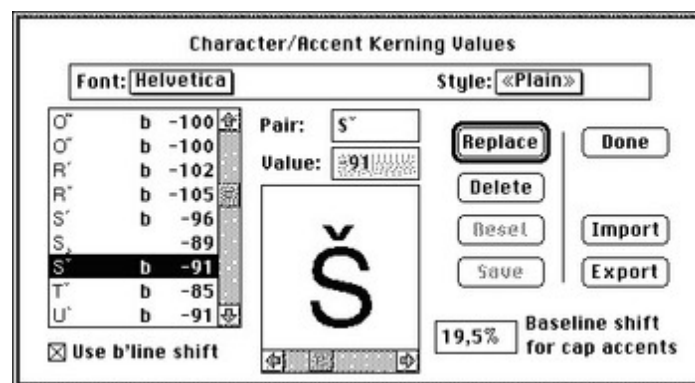

The AccentMaster XTension allows the easy "accentuation" of each sign in a Macintosh font.

Each accent will be relocated to a negative kerning, whenever it shall be placed above a letter. It is possible to define this individually. Furthermore the vertical finishing of the accent on the letter can be edited freely.

AccentMaster has three components

- AccentMaster XTension
- Keyboard Driver for system 6 and 7
- Optional Fonts

This XTension works as well with TrueType as with Type-1 Fonts.
