# Badia LiveKeys

Customize all keyboard shortcuts in QuarkXPress

Badia LiveKeys gives you the freedom to make QuarkXPress shortcuts work just the way you want. Now you can customize all menu shortcuts, assign keyboard equivalents to tools and special commands, manage style sheet shortcuts easily, check for keystroke conflicts, share custom sets, and more.

Menu Shortcuts
Put yourself in charge of XPress menu shortcuts and choose the ones that suit your work habits. Assign shortcuts to menus you could only access with the mouse before, or change those already assigned to combinations that are easier to remember or that match other programs you use. All standard QuarkXPress menus and submenus are supported by LiveKeys, so you can customize virtually any of their menu item keystrokes, including those added by third-party XTensions and QuarkXTensions.

Tool Shortcuts
Eliminate countless mouse trips to the Tools palette by assigning LiveKeys shortcuts to all QuarkXPress tools, including web tools. Then you can switch back and forth between them with just a keystroke.

Hidden Shortcuts
Hidden commands are those not displayed anywhere in QuarkXPress, such as 'increase leading' or 'scroll to start of document'. Customize their shortcuts or just browse the list to remind you of the more obscure shortcuts: you may even discover commands and shortcuts you weren't aware of before.

Style Sheet Shortcuts
Although QuarkXPress allows you to assign shortcuts to style sheets one at a time, LiveKeys offers a more convenient and safer way to do so. Not only can you now see and change them all at once, but LiveKeys also checks for possible conflicts with menus or other shortcuts in real time.

Managing Shortcut Sets
Define your favorite shortcuts once and save them as a custom shortcut set. Maintain sets for different projects, distribute them within the workplace, or create sets that match other

applications you commonly use.

Manage All Shortcuts with Ease
LiveKeys lets you experiment with different shortcuts, offering options to assign, remove, undo or go back to the default keyboard equivalents. In addition, LiveKeys warns you about any possible conflicts with shortcuts already assigned to other commands and can automatically resolve them for you.
