

Badia OpenNow Pro

Open pictures in XPress with your favourite image editor

With OpenNow Pro you are no longer limited to opening a picture with the application that the OS X Finder assigns by default. You can now select any application you choose, and OpenNow Pro will add it to a list of 50 recent applications so that you can always switch back and forth between your favorite image editors.

Detailed Picture Info

If all you need is to access image settings quickly and easily, then the OpenNow Pro window puts all the information at your fingertips. Presented in an easy-to-read format, OpenNow Pro shows you these picture attributes: name and file icon, full path, file size, dimensions, scaling, format, color model, absolute and effective resolutions, date modified, picture status, color profile, preview resolution and default editing application.

The Right Tools

In addition, OpenNow Pro comes with several useful tools for managing pictures. You can reveal the picture or any of its enclosing folders in the Finder, bring the picture up to date after it has been modified, change the preview resolution from high to low or vice-versa, and open the Picture Usage window to search for missing pictures.

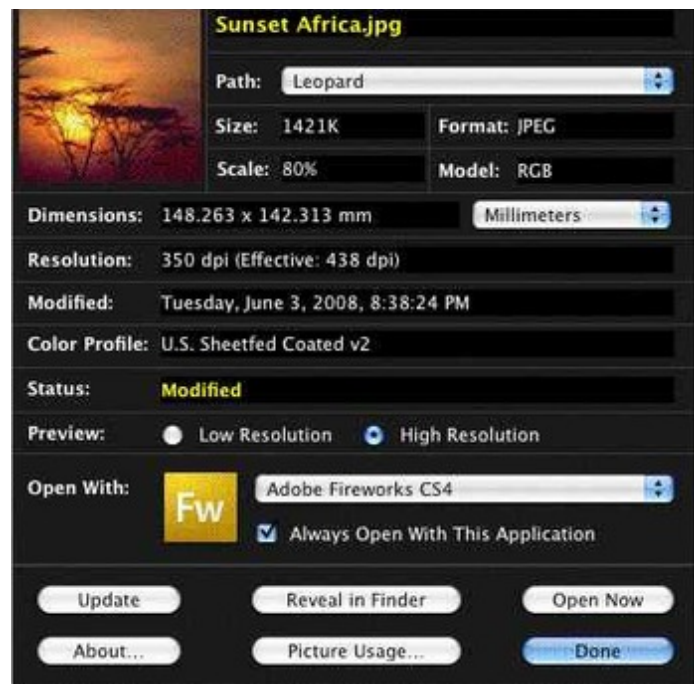

You can also lock any given application to open all subsequent pictures with this application only.

NEW! OpenNow Pro for QuarkXPress 8 with these additional features:

- Image browsing through the entire spread.
- Full picture preview.
- Supports Style menu and contextual menu.
- Redesigned, modern user interface.
