CollectFonts

Extension of the function "collect for output"

The QuarkXTension "CollectFonts" completes the QuarkXPress function "collect for output" with the function "add fonts". You mave have also asked yourself, why you always have to search tediously for fonts, which are included in the document, belatedly.

The completion with "CollectFonts" frees you from this annoying task and deletes the last source of errors when collecting a job. Only these screen and printer fonts will reliably be saved, which are really in use. Also the styles (about 47 for each font) and the producers of the fonts will be filtered if they are in use.
