

DesignStation

Composition of XTensions for ad typesetting

DesignStation is a composition of XTensions, which support professional ad typesetting and are therefore especially useful for newspapers and magazines. It includes **Celler**, an XTension, which allows multiple duplicating in both directions. **Starbust** generates easily and fast stars, which are used in many areas. **Autosave** saves documents in adjustable intervalls.

PictureScale, **TextFit** and other tools provide setting possibilities for text editing, frame and picture scalings. **Shadow** generates shadows for all frames, and it is possible to edit the color and opacity as well. **JobFolder** identifies all datafiles which are part of the document and copies them in an single folder. **DocumentReport** builds a complete report about a file, including all informations about fonts, pictures, style templates etc., and **DocumentCompare** allows comparing of XPress documents. At last **AdLayout** allows the fast creation of ads based on ready-made ad samples including automated picture import and text import out of ASCII data files.
