

ex AdJob

Define your own settings for ad production.

Developed for ad typesetting, the XTension provides a dialog box in which an ad insertion order can be generated to create a QuarkXPress document according to entered values. It also allows you to enter information for slave files (numerous insertions of the same ad). In the preferences you define column width and gutter; eliminating wrong column widths. Ad identification information is imported from the commercial ad system. This XTension must be customized
