

## ex ContentBrowser

**Content- and Resource-planing direct in QuarkXPress with an XPress palette.**

The XTension ex ContentBrowser enables a fast and efficient content search within different databases. By using connectors different datasources can be linked in. For example:

- SQL-databases (e.g. MySQL)
- Digital Asset Management Systems
- **dio:content from Picturesafe**
- **Fotoware (with Fotoweb)**
- **Alfresco**

Example workflow with Fotoweb from  
Fotoware

Connectors for other databases can be realized quickly.

The searched data will be entered in a palette directly in QuarkXPress, QuarkCopyDesk and in connection with the QuarkPublishing System.

Content can be searched in the following data sources:

- Production databases
- Archive databases
- RSS Feeds
- Newscusters (only with dio:content)
- **Wires (ex Wire)**
- Internet (Searchengines, Wikipedia etc.)

With ex ContentBrowser content can be searched and the results can be gathered in different subjects and checked in directly to a publishing system. The XTension is very flexibel in configuration.

Issues and Resources can be planed and sheduled fast and clearly arranged.
