

ex ConvertPro

Search and Replace in QuarkXPress

The XTension ex ConvertPro allows you to Search and Replace text strings and pictures in a QuarkXPress document. The preferences of the XTension offer the possibility to create different rules, which can be used to convert the text. Additionally you can use a tab separated text file which contains the search and replace couples.

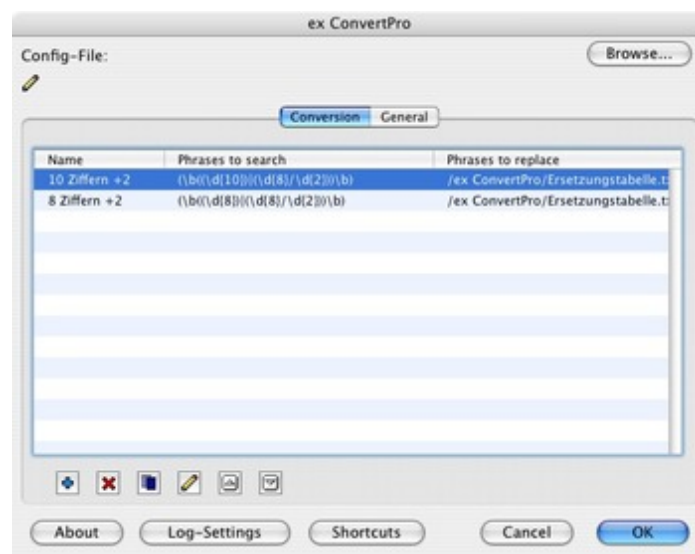

In order to replace pictures in a QuarkXPress document you also need a tab separated text file which contains the full path to the original and the new picture.

Next to a string conversion you can use "regular expressions" to find text as well as to replace text. Regular expressions offer the possibility to create complex text replacements

Please find further information here:

en.wikipedia.org/wiki/Regular_expression

The integration of other replacing routines, like perl scripts, is planned.
