

## ex DBLink

Automatically update QuarkXPress Documents from a database generated ASCII file

### Everybody knows the scenario:

Your hundred page catalog is almost ready. The product images have been gathered and saved in the proper resolution, all text has been entered and edited for the appropriate articles, and the proper pricing has been allocated to articles. Unfortunately, the dollar course has adjusted drastically, and your Euro prices have to be adjusted accordingly, before the Catalog is due to go into production. This probably won't be the last time the prices have to be adjusted for your quarterly catalog either. If this sounds familiar, ex DBLink maybe be the XTension you are looking for.

### What to do?

With this useful QuarkXpress™ XTension, you can request a structured text file from your merchandise departments database, which contains the new pricing. After assigning place holders for the new pricing, and associating the unique article number to the placeholders, you can update your prices (and other attributes as well) quickly with a few clicks of a mouse, and then send your catalog to the printer. The time savings are enormous.

update with exDBLink = 1 hour!

Manually - without ex DBLink = 3 Days..!

### Here is how it works:

Within the QuarkXPress document, you assign a place holder to a unique article number from your structured Text file with the help of the ex DBLink palette. This reference can be anything from a volume discount to a special code for the article.

The following example shows a QuarkXPress™ document with an article number 615809 and a unit price. These items have been exported from the merchandising database to the ASCII document under the unique article number 615809. You can define as many attributes as you require for an article number.

**Der Frühling kann kommen...**

Heute bestellt - Morgen geliefert!

**Phacelia**

Inhalt reicht für ca.: 100 m<sup>2</sup>. Phacelia ist fruchtfolge-neutral und kann daher vor jeder gärtnerischen Kultur gesät werden. Unterdrückt Unkraut und steigert nachhaltig den Ernteertrag. Zum Zeitpunkt der Blüte verwandelt sich die Fläche in ein reich blühendes, farblaudes Blütenmeer. Sehr gute Bienenweide.!

Art.-Nr.: 615809 z.B. 400 g Packung : **6,95**

**Gelbsenf**

Inhalt reicht für ca.: 100 m<sup>2</sup>. Gelbsenf bedeckt mit seinen schnell wachsenden Blättern in kurzer Zeit den Boden und bewahrt ihn so vor Austrocknung und Erosion durch Wind und Wasser. Gute Nährstoffbindung und Bodenlockerung. Senföle unterbinden die Verbreitung von Rüben-Nematoden. Wirtspflanze für Schmetterlinge. Wichtiger Hinweis: Gelbsenf bitte nicht als Vorfrucht von Koblengewächsen verwenden.!

Art.-Nr.: 615557 z.B. 500 g Karton- **4,95**

**Weißklee**

Inhalt reicht für ca.: 30 m<sup>2</sup>. Lebenszyklus: mehr-jährig. Mehrjährige, frostharte Gründungs-pflanze. Niedrig wachsend für die Untersaat von Gemüsesorten, die einen weiten Abstand benötigen. Bienenweide. Blattreich, daher gute Bodenbesuchung. Pfahlwurzeln sorgen für eine gute Durch-lüftung des Bodens.!

Art.-Nr.: 616905 10kg- **13,95**

ex DBLink

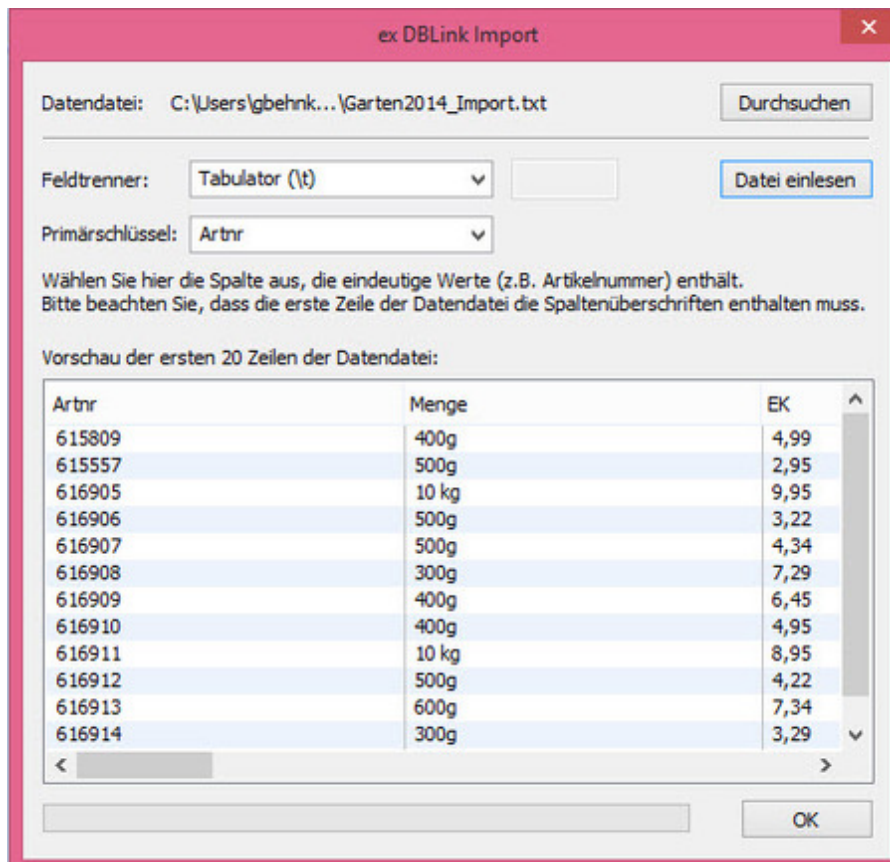

Datendatei: Garten2014\_import.txt

Artnr: 615809

Zuordnung: Artnr

The new prices have been updated in the QuarkXPress file. A Quark XPress document with 5000 entries that has been prepared in the way described above, will updated in a few seconds.

This XTension loads structured ASCII files from an external database.

Placeholders which represent a database entry are defined in the QuarkXPress™ layout . The placeholders can be inserted anywhere in the document and move with the text. They are saved with the document to i.e. update price lists fast and efficiently.
