

ex FlexObjects

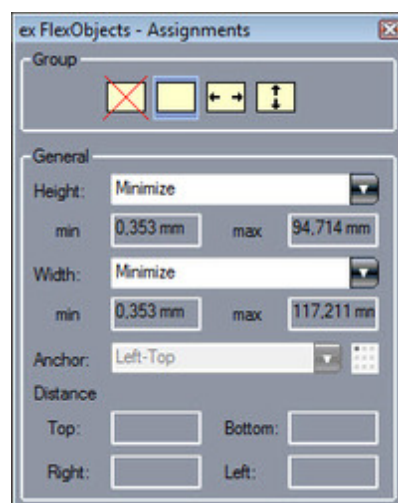

Generate dynamic QuarkXPress Layouts

ex FlexObjects is a unique tool to generate dynamic QuarkXPress templates. The dynamic templates allows the automated creation of complex publications with variable content. By using this XTension, you can minimize the number of your needed layout templates as well as your post-production process. The XTension can define attributes of object properties (text- and imageboxes). For example:

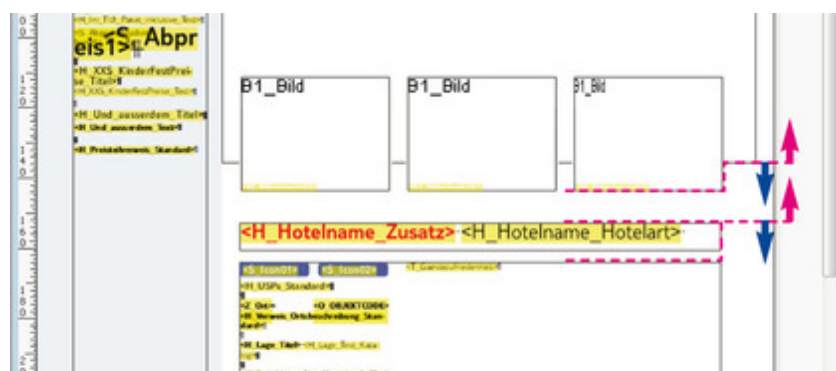

- Sizeadjustment of objectframes to the contained content
- Distance between boxes and groups
- etc

Furthermore it is possible to manage the behaviour of grouped objects.

Dependent on the setted preferences, the objectframes fit to the layout.
