

ex OverSet Pro ID

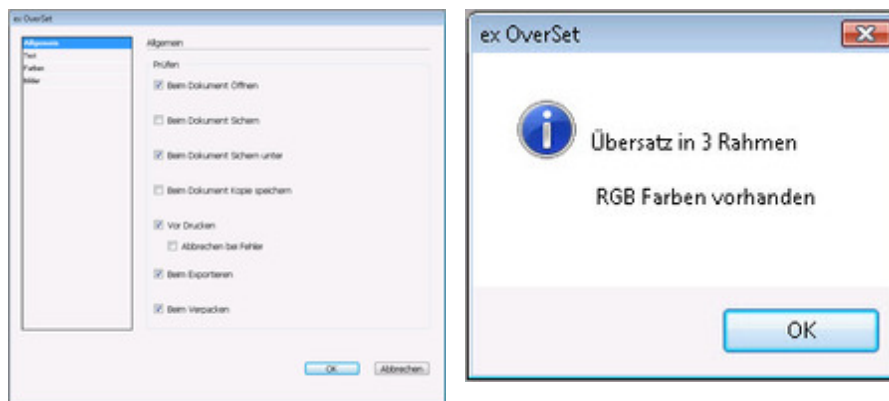

Monitor InDesign documents for text-overflow, rgb/hsb and spot colors, pictures with incorrect spot colors and missing or modified pictures

ex OverSet Pro ID is an Adobe InDesign PlugIn which allows you to monitor Adobe InDesign documents for:

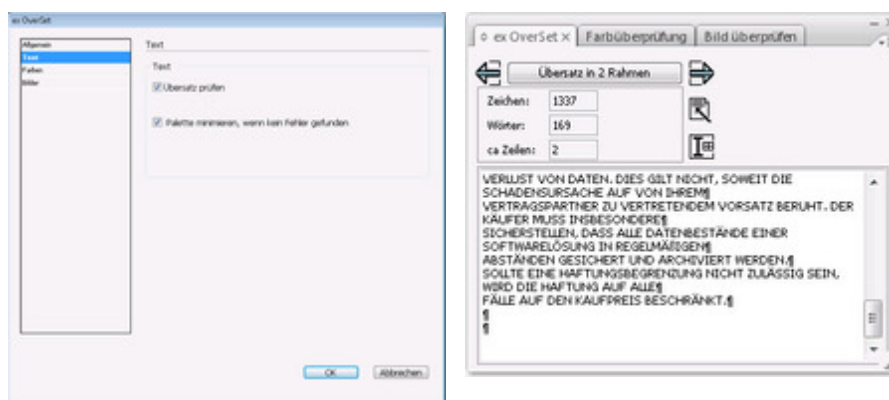

- Text Overflow (including extra carriage returns at the end of a text chain)
- RGB / HSB and Spot colors
- Pictures with incorrect color models
- Missing or modified pictures (You can update missing pictures with the "Find picture" button)

ex OverSet Pro ID can be configure to alert you to the existence of these issues during various file-based operations.

- Open
- Print
- Save, Save as EPS
- Collect for output

ex OverSet Pro ID displays text overset in a separate floating palette. It displays how many text boxes in a document have overset and allows the user to navigate through the document with arrows to find all respective boxes. If the text is edited the displayed overset is updated automatically, so that is easy to adjust the text amount to the box geometry. Last returns are deleted with a click of the mouse.

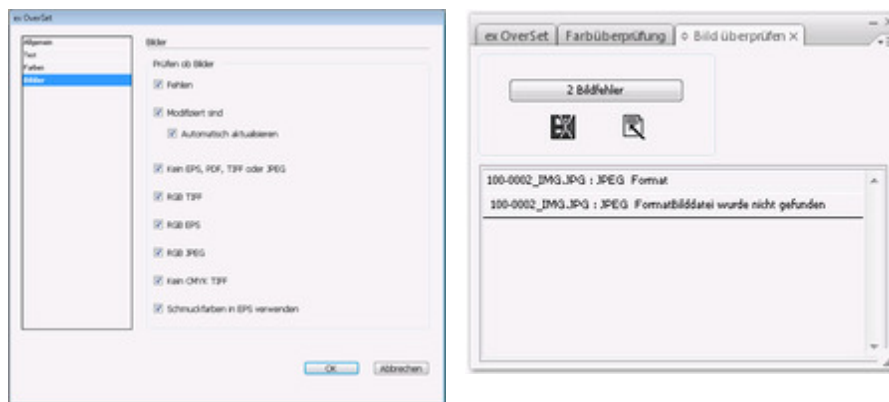

In the **QPS** version of ex OverSet Pro ID the user can define a QPS Status until which overset will be allowed. If a layout with a higher status has textboxes containing overset, the status will automatically set back to the defined status.

ex OverSet Pro shows also pictures and colors which may lead to problems in a separate floating palette. RGB/HSB and spot colors can be converted to CMYK colors automatically.

ex OverSet Pro ID updates modified pictures. ex OverSet Pro ID gives a message if an InDesign document contains pictures of these types: RGB-TIFF, RGB-EPS, RGB-JPEG and other non-CMYK pictures. Additionally ex OverSet Pro ID detects spot colors used in EPS files. You can update missing pictures with the button Find picture. Users can directly open the original image file when pressing the "find picture" button (original creator software is required to perform this operation).
