

ex Plan2Page

A planning tool based on QuarkXPress-documents and automatic creation of production pages into QPS (or the file system)

A planning document (meaning a QuarkXPress document, which shows the structure of an issue (including press setup) with all pages and placeholders of ads) will be splitted to production documents. The document will be divided according to presets in single or facing pages or multi-page documents.

The new QuarkXPress documents contain the appropriate information from the QPS system like status, sections/subsections or other header data. If used, the information of the XTensions **ex DataLookUp** and **ex Ad2PlanPro** are also included.

This covers colour usage and ads / dummies with the correct attributes automatically.

The QuarkXPress documents will be named automatically according to a naming scheme, checked in in QPS (or saved to a folder) and routed to the corresponding users.

ex Plan2Page also served as an interface to other planning systems.

In this case the structure including ads are coming from other XTension modules like **ex PPI2Q**, **ex Adbase2Q** or **ex Funkinform2Q** with all required data supplied for generation of the planning document.

The screenshot shows the 'ex Plan2Page' application window. It features a menu bar with options like 'Pages', '<FF>', '<FF> MP_E', '<YYYYMMDD>', '<CC>', 'V1', and 'Gefahrer Allege'. Below the menu is a toolbar with icons for various functions. The main area contains a large table with columns for 'No.', 'Page', 'Projectname', 'Section', 'Unter-Section', 'Pageformat', 'Hauptpage', 'Spalte', 'Routet to', 'Zustand', 'Druck. Nr.', 'Druck. Date', and 'Sa.'. The table lists numerous rows of data, including page numbers, project names, sections, and their respective states and dates. At the bottom, there is a status bar with fields for 'Sport', 'Sport', 'Single', 'SPD-Sp', 'unbea', and dates '19.00' and '12.07.2008'.
