

ex PreviewRecreator

Windows based QDMS server XTension which creates MMO roles (thumbnails and previews) for QuarkXPress files

ex PreviewRecreator is a Windows based QDMS server XTension. It creates a MMO role - thumbnails and previews - for these QuarkXPress documents without MMO roles.

The **ex PreviewCreator** is used to define MMO roles in QuarkXPress. It is a QXP standard XTension that generates previews in the various page formats a QuarkXPress document may have. ex PreviewRecreator searches also PDF files without MMO roles and saves them in a workspace called PDFS_WITHOUT_PREVIEW_<YYYYDDMM>. This can be used with ex PSPreview XT to generate MMO roles for PDF files.
