

## ex RTF Filter

Exchange RTF files between QuarkXPress and e.g. WinWord including style sheets

ex RTF Filter is a filter for importing and exporting RTF files (Rich Text Format) in QuarkXPress. It reads all RTF type files e.g., created by Microsoft Word.

If text originates from Windows programs, special characters (from other languages i.e.) are changed to Macintosh keys when importing.

ex RTF Filter imports all text attributes from the original program (formats, format styles or stylesheets) including created footnotes, and indexes if created by the IndexTension and the fXT. (fXT runs only with QuarkXPress 4.11!!). Text can also be exported in RTF format.
