

ex SearchArchive

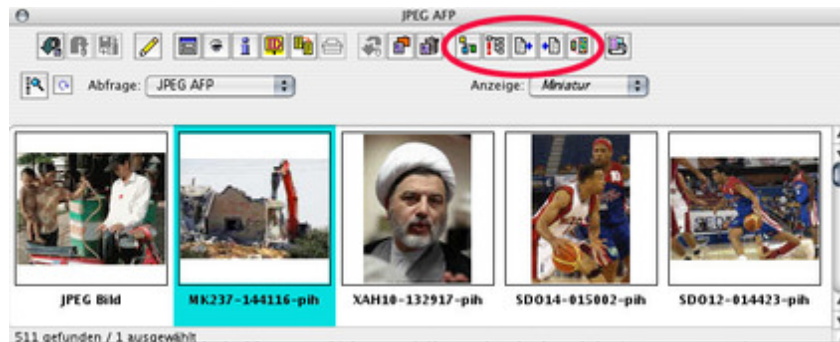

Extended assetsearch for the QuarkMediaManager database

ex SearchArchive is an XTension, which provides a simplified search interface for QDMS items, as the search interface of QDMS queries is very complex.

ex SearchArchive searches for asset names as well as content of texts, or, in case of pictures, it is possible to search for i.e. the caption. The result is shown in a new QCM query palette.

Another function allows to copy attributes from one asset to another one.

The QCM query palette contains different new symbols in order to easily execute the new functions.

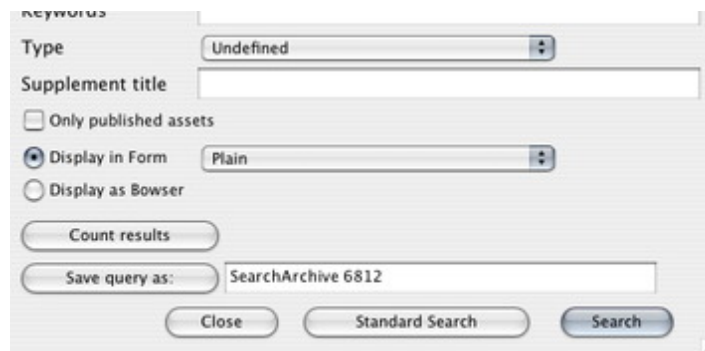

The enhanced text search offers different options to search the QCM database.

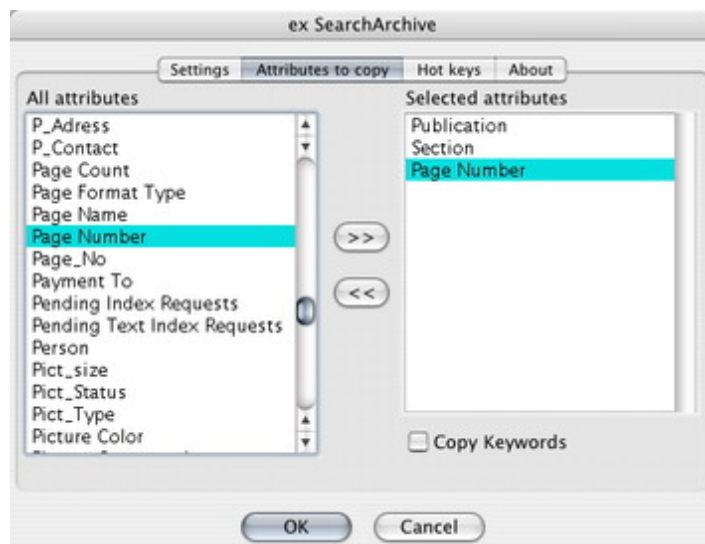

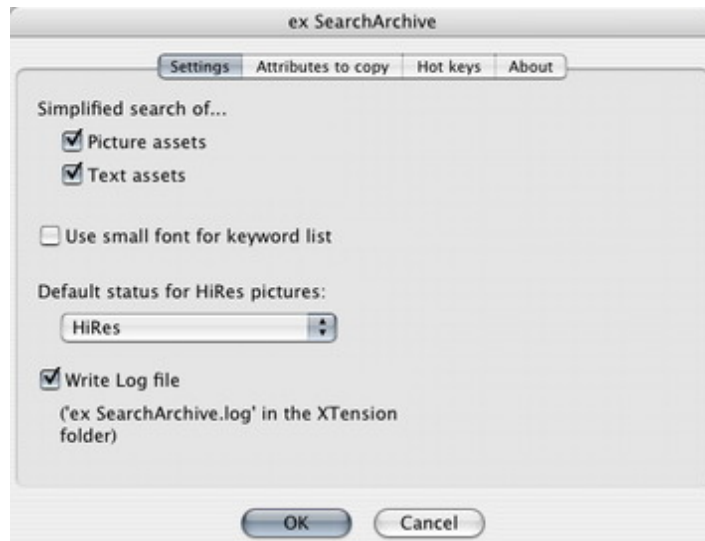

A screenshot of a dialog box titled "Advanced Text Search". It contains several input fields and dropdown menus. The "Body text" field is highlighted in blue and contains the word "cycling". Other fields include "Headings", "Page name", "Publication" (set to "MFN"), "Edition" (set to "First"), "Section" (set to "Sport"), "Publication Date" (with "to" separator), "Page No.", and "Supplement title". There are checkboxes for "Only published assets" and "Display in Form" (selected) vs "Display as Browser". A "Count results" button is present. At the bottom, there is a "Save query as:" field with the text "SearchArchive 6812", and "Close", "Standard Search", and "Search" buttons.

The enhanced text search offers different options to search the QCM database.

A screenshot of a dialog box titled "Advanced Picture Search". It contains several input fields and dropdown menus. The "Original caption" field is highlighted in blue and contains the word "cycling". Other fields include "Published caption", "Headings", "Byline", "Page name", "Publication" (set to "MFN"), "Country", "Edition" (set to "First"), "Section" (set to "Sport"), "Publication Date" (with "to" separator), "Page No.", and "Keywords".
