

ex ShowAssets

places a menu option in the QuarkDMS option on the QuarkXPress menubar

ex ShowAssets XTension is a handy little tool which places a menu option in the QuarkDMS option on the QuarkXPress menubar. Activating this option creates a QuarkDMS query of all QDMS assets used in the active document, and lists them all in a QDMS query palette. Installing ex ShowAssets places an entry under the QuarkDMS option in the QuarkXPress menubar. There are no preferences to set, or utilities to activate.
