ex TranslationFilter Server

The server-solution for efficient handling of QuarkXPress and Adobe InDesign layouts for translation issues

The workflow solution ex TranslationFilter Server expands the functionality of the desktop solution "ex TranslationFilter". This system enables an easy document management and administration workflow of layout documents over the internet.

ex TranslationFilterServer enables involved persons of a translation workflow like translators, marketing people, etc. a worldwide access to the documents for translation approval and correction issues. The workflow is browser based and therefore location independent. The documents can be handled in 2 ways. The first is to download a document to work on it online and upload after editing. The second is to work online in WYSIWYG mode.

The document system is controlled by a role-, user- and status based access management (document management).
