

ex UsageReporter

FrontEnd XTension collects informations about published publications for executing digital copyrights

ex UsageReporter is a front end utility for collection informations about the executing of digital copyrights in published publications. The ex UsageReporter checks a QuarkDMS collection, which is created by ex Archive to DMS XTension, and writes selected attributes in a tab text file: one file for pictures and one file for text. These files become part of the collection.

The report of use is a standard part of the asset class excel document, which is not more to be about than a simple tab text file, which opens automatically MS Excel.
