

ex VertikalerKeil

Apply true vertical justification even to multicolumn boxes

ex VertikalerKeil allows you to define a relative rank for space before or after paragraphs with different specifications for each stylesheet. After definition, true vertical justification is easy. The XTension also works in multicolumn boxes and text chains. Now you can avoid big gaps between paragraphs, even when size or text box position has been changed, your text is automatically updated. Now also available for CopyDesk.
