

FCSPrint

automatically set all the options of the Setup an Print dialog boxes

FCSPrint will automatically set all the options of the Setup and Print dialog boxes to save as much film as possible and to avoid ever-costly human errors. Service Bureaus who have been testing this product for over a year report incredible savings in time and errors made. The operator needs only to specify the resolution, screen ruling and type of job (e.g. RC Paper, film, film with separations, or color proof) and this XTension does the rest! The job will always be sent to the printer at the best orientation and with all the correct settings (emulsion side, crop marks, etc.). This XTension even warns you on small page jobs to switch to a smaller film width to save you money, or just to let you know that the job does not fit the larger film width.
