

# Greeker

## Change from readable to unreadable text

Greeker allows you to scramble the selected text. Our proprietary technique leaves all the words right where they are on the page but makes them unreadable. This is useful for sending a client a dummy copy, yet giving him or her a clear picture of how the final piece will look. To Greek text simply select the text or text boxes you wish to Greek and choose Greek and Ungreek Text from the GLUON Menu. Once you have used Greek Text on some text you can Ungreek it by selecting the text and using the Greek and Ungreek Text menu item again. Not only will this save time when going to finals (one is not stuck replacing ancient Lorem Ipsum copy though we also give you this option), but there cannot be any layout surprises because everyone in the production process will have been using the real copy.

### Features:

- Greek live copy instead of using Lorem Ipsum or squiggles
- Ungreek takes you back to your original copy.
- Automatically fill an empty text box with Lorem Ipsum
- The ProGreeker interface makes it easy to greek text document wide by entering in the parameters of what sizes of text you want to be unreadable.
